

ArcGIS 10.5 for Desktop Student Trial - 1 Year Licensed Software

The **ArcGIS 10.5.1 for Desktop Advanced** trial software requires an authorization number that must be activated **before use**. An authorization number may be obtained via email (from mdhyslop at [mtu.edu](mailto:mdhyslop@mtu.edu)). Visit www.esri.com/StudentEdition to activate your authorization number **before installing** the software. An ESRI Global Account is required. (If you do not already have an ESRI Global Account, you can create one at this website.)

Please note that the term of the license for the Student Trial Edition is **365 days** post-activation and the license level is **ArcGIS for Desktop Advanced**.

Installation Instructions

- 1) Log in with your ESRI Global Account (see above) and activate your authorization number
- 2) Mount the ISO. From the disc, run the **ArcGIS_Desktop_1051.exe** application (there will be a version number as the last part of the file name) to extract the installer files for ArcGIS for Desktop. You will temporarily need ~ 1 TB of disc space, and will be prompted to run the installer once the extraction is finished.
- 3) Wait for the installer to load (authenticate as administrator as necessary), **accept** the license agreement, choose a **Complete install**, and install to the **default location**.
- 4) After the install completes, click **Finish** and choose **Advanced (ArcInfo) Single Use** from the ArcGIS Administrator. Click **Authorize Now** and choose “I have installed my software and need to authorize it”, “Authorize with ESRI using the Internet”, enter contact information, and enter your authorization number (already activated). Choose “I do not want to authorize any extensions” (and don’t evaluate any extensions either - they are included with your license).
- 5) If you wish, extract and install any needed optional components (background geoprocessing, data interoperability, data reviewer, workflow manager) from the disc. •Any installer directories can be deleted after you have finished installing software.

You should download and install the latest service packs periodically, available from <http://support.esri.com/> Choose **Downloads** and look for **ArcMap** under **ArcGIS Desktop** from the list of products and use the filter to select only **your installed version**.

As of August 2017, **ArcGIS 10.5.1** is the current version.

There are patches regularly released available from support.esri.com you may wish to install.

If you have questions, please contact **mdhyslop at mtu.edu**
